

Merrick & Company was selected to provide a wide array of district consulting engineering services for the Arapahoe County Water and Wastewater Authority in Arapahoe County Colorado. This authority covers approximately eight square miles including both commercial and residential land uses. For its water system, the authority utilizes a deep well water supply system together with various storage tanks, transmission lines, and a network of distribution lines.

The wastewater system includes collection lines, an outfall system, and a treatment plant.

The Arapahoe County Water and Wastewater Authority is a quasi-municipal agency established to provide the water and wastewater services required for a highly important and growing area within the central portion of Arapahoe County.

Merrick provided the following services to the authority:

- Consulting engineering
- Plan review services
- Construction inspection services
- Design services
- Modeling
- Surveying services
