# Grounded in Design, Built for People

At Merrick, we believe a landscape should do more than look good—it should serve the people who use it. Whether it's a river park, residential open space, or a government facility campus, we specialize in complex projects where multiple stakeholders are involved. Our team brings both creativity and practicality to ensure your project stays on

track, within budget, and meets the needs of everyone involved.

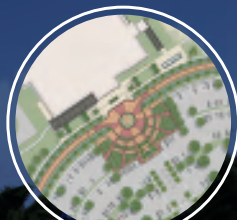

We work closely with you, staying flexible to respond to changes and updates throughout the process. By factoring in every detail—from sustainable plantings to infrastructure needs—our designs ensure that your vision becomes a reality.

# SHAPING EVERY SPACE WITH PURPOSE

At the heart of our approach is a deep understanding of the land and the people who engage with it. Each site brings unique opportunities and challenges, and we take the time to carefully study not only its natural features and infrastructure needs, but also how the space can best serve the community around it. This thorough analysis guides our designs, ensuring they integrate seamlessly into their surroundings while enhancing the way people experience the space.

Because it's not just about plans on paper. It's about knowing how the land and people will interact over time. From the way the terrain flows to how water moves through a site, every decision is rooted in thoughtful study and a deep understanding of what makes each space unique.

**It's what makes the space we design not only work, but thrive, for years to come.**

# Experience Your Project **Before It's Built**

We provide tools to help you see your project clearly. Our 3D renderings and fly-through videos let you visualize every detail—from grading and infrastructure to materials and layout. With multiple design options and insights into potential challenges, you can make informed decisions at every step.

By considering the terrain, grading, and environmental factors, we transform abstract ideas into actionable plans. Whether presenting to stakeholders or refining the design, you'll have the clarity needed to proceed with confidence.
